

## Scenario:

You are a college student that is having a hard time staying active and meeting new people. You would like to find a way to make new friends and also stay active and healthy without just going to the gym. You decide to use our app, TeamFinder.

Task 1: You are new to the app and you need to find a local team to join. Find a team and fill out an interest form.

Task 2: You are a coach/owner of a team. You need to create/customize a schedule for you and your team.

Task 3: Your friend is a part of a different league than yours. Find his league and view his/her team's record.

## Notes:

What changes should be made:

1. There is no button to return to the main/opening screen of the app.
2. There should be a way to search for multiple sports when looking for new teams.
3. New users should enter their contact information so that coaches or other members can reach out to them about games,schedules, etc.
4. There should be a page detailing the different difficulties of each league.

What you need to keep the same:

1. Opening page of app with customizable header.
2. Link to our website.
3. Ability to look at each team's info before contacting them or adding them to schedule.
4. Interest forms.
5. Ability to Contact coaches before filling out interest forms.
6. Customizable team pages.
7. Multiple possible Schedules.
